

Tiki'labs Nominated for the Best Mobile Investment Opportunity SPIFFY Award

Paris, January 7th 2009

Tiki'labs, a French startup company developing a ground-breaking 6-keys user interface engine, has been nominated at the prestigious SPIFFY awards presented by the Service Providers Forum (SPIF) of the Telecom Council of Silicon Valley. A SPIFFY nomination indicates that a startup has innovation, opportunity and a quantifiable interest among the Council 20 global Service Providers.

"This nomination for an award is a great milestone in Tiki'labs history but it also indicates that the user interface is a key element for unlocking the usage specifically on small screen devices" said Xavier Paulik, CEO of Tiki'labs, "Tiki'labs has the power to dramatically change the user experience and sustain the mobile web usage growth".

The nomination for the Zephyr Award for Best Mobile Opportunity recognizes Tiki'labs as the best investment opportunity within the mobile telecom sector that the Council has seen at the SPIF Meeting in the past two years.

The SPIFFY award winners will be announced on February 25th 2010 in Palo Alto, California.

Recently Tiki'labs has also been distinguished by the French Ministry for the Development of the Digital Economy by having two projects selected for the Proxima Mobile initiative.

About Tiki'labs

Tiki'labs develops and commercializes a new generation of user interfaces for any type of electronic devices (mobile phones, PC, TV). Its patented Tiki6Keys[®] technology is particularly well suited for touch-screen devices. With only 6 keys, it enables all kind of navigations (web, VOD and content catalogue and in-device) and text typing operations, comfortably, even with one hand and without any stylus.
